"docker pull" requires exactly 1 argument.
See 'docker pull --help'.

Usage:  docker pull [OPTIONS] NAME[:TAG|@DIGEST]

Pull an image or a repository from a registry

C:\WINDOWS\system32>docker pull plasmadonar
Using default tag: latest
Error response from daemon: pull access denied for plasmadonar, repository does not exist or may require 'docker login': denied: requested access to the resource is denied

C:\WINDOWS\system32>docker images

The screenshot shows the PyCharm IDE interface. The main editor window displays the code for `main.py`:

```
1 from flask import Flask
2
3 app = Flask(__name__)
4
5 @app.route("/")
6 def home():
7     return "<h1>Hello, World!</h1>" \
8         "<p> Welcome to Plasma Donor Application</p>"
9
10 if __name__ == '__main__':
11     app.run(debug=True)
```

The Run console at the bottom shows the following output:

```
Run: main
"C:\Users\ransa\PycharmProjects\python flask\venv\Scripts\python.exe" "C:\Users\ransa\PycharmProjects\python flask/main.py"
* Serving Flask app 'main'
